SUMMARY

Full-stack developer focused on building production-style web applications with real authentication, database design, and deployment pipelines. Strong foundation in data structures and algorithms, with 300+ problems solved across LeetCode and Codeforces (950+ Codeforces rating). Comfortable across the full stack: React/Next.js, Node.js/Express, TypeScript, PostgreSQL, and REST API design.

SKILLS

Languages: Python, TypeScript, JavaScript, Java, C++

Web & Backend: Next.js, React, Node.js, Express.js, REST APIs, Prisma ORM

Databases: PostgreSQL, MySQL, NoSQL

Tools & Platforms: Git/GitHub, Docker, Vercel, Render, Supabase, Google OAuth 2.0, JWT

Other: Data Structures & Algorithms, Excel, Tableau

PROJECTS

Laundry Management System

github.com/uATrisk/clms | *clms-murex.vercel.app*

React.js, TypeScript, Node.js, Express.js, Prisma ORM, PostgreSQL, JWT, Google OAuth 2.0

Full-stack laundry management platform for a university campus serving three user roles (students, staff, admins), replacing manual tracking with real-time order status and automated OTP-based pickup verification.

- Designed a PostgreSQL schema with Prisma ORM enforcing single-active-order rules per student and full audit-trail logging on every status change.
- Implemented Google OAuth restricted to institutional email domains, with JWT-based session auth across a role-protected REST API.
- Deployed a production pipeline (Vercel + Render + Neon) with environment-based CORS policies and health-check monitoring.

PSYS – Multi-Tenant Classroom Attendance System

github.com/ps-ys/PSYS

Next.js (App Router), TypeScript, Supabase (PostgreSQL + pgvector), Python, Razorpay

Multi-tenant classroom attendance system using face recognition, automating student check-ins by matching camera captures against enrolled student profiles.

- Architected a split codebase: a Next.js web app for rosters, enrollment, and check-ins, alongside a separate Python camera service handling real-time face matching and session timing/quorum logic.
- Used Supabase Postgres with pgvector to store and query face embeddings, with both services sharing core tables (class_sessions, attendance_observations, class_enrollments).
- Centralized shared business logic (e.g., roster derivation) in Postgres SQL functions to keep the Next.js and Python codebases from drifting apart on core rules.

EDUCATION

Newton School of Technology – B.Tech, Computer Science & AI

2024 – 2028 | Currently in Semester 5

ACHIEVEMENTS & LEADERSHIP

- Solved 300+ Data Structures & Algorithms problems across LeetCode and Codeforces; Codeforces rating of 950+.
- Referred and onboarded 60+ students to Newton School of Technology, demonstrating strong communication and outreach ability.
